

## Tingle Version 4.1

Improvements and implementations from lecture 09-03-16:

Only 1 line permitted in EditText (maxLines="1" and InputType="text")

Tabbing between editText;

```
NextFocusDown (@+id)
imeOption="actionNext"
```

```
TextEdit_id_newWhere
imeOption="actionDone"
```

Hide keyboard when EditText is no longer in use(focus)

EditText: newWhat, newWhere and newSearch

Trim() is implemented as the user searches through the list

SimilarWords Levenshtein method - distance of 1 & 2 are shown

Search compares with lower case letters no matter the input

Case: Bag = bag & bag = Bag

Search ranking system:

1. Search finds actual word (lower/upper case letters are equal)
2. Finds similar words distance 1
3. Finds similar words distance 2
4. Finds similar words distance 3
5. Else print "Non words found"
